

AP191A is a low cost and reliable digital poster where user can easily update the pictures to be shown on the screen. It can be widely used in any public area for replacing the current paper poster, where there is no massive video transmit and no real time message broadcast

Application:

- *Queuing System Display*
- *Shop Promotion Display*
- *Notice Board Display*

Main Features:

- 19" TFT screen, with wide viewing angles and metal casing.
- Built-in SD card for local storage
- Text message can be updated to the display from the control terminal.
- Can be daisy chained together by RS485 to save the cable routing cost.
- Any failed machine will not block the message sent to the poster behind.
- The front control terminal can be as simple as a customized keypad up to a PC workstation or server
- The control terminal will allow user to:
 - enter the instant message
 - change the pictures (stored in the SD card) to be shown on the poster

Infrastructure of Easy Digital Poster Chain

Choices for the Control Terminal

1) Simple pinpad with customized firmware

2) Keyboard terminal with customized firmware

3) PC Workstation or Server
